

Magnetic Seizure Therapy

What is this useful for?

- Parkinson's Disease
- Depression
- Obsessive Compulsive Disorder

Risks

MST is still under clinical trials for testing its effectiveness for different conditions, as well as determining its relative safety. Some of the risks associated with it are as follows:

- Headaches/scalp pain
- Dizziness
- Muscle aches and soreness
- Cognitive side-effects, although less frequent
- Changes in blood pressure, heart rate

MST as a treatment option?

Are there any other questions that you may want to ask a clinician to weigh in the pros and cons of MST? What other clarifications could you seek for the risks mentioned above to make an informed decision?
