

Transcranial Direct Current Stimulation

What is this useful for?

- Major depression
- Fibromyalgia
- Neuropathic Pain
- Migraines
- Parkinson's Disease

Risks

tDCS is relatively safe due to its non-implantable nature, but like all therapies, may pose minor side effects:

- Mild electrical burns resulting from inappropriate use
- Minor skin irritations
- Headaches
- Nausea
- Tingling sensations

tDCS as a treatment option?

Are there any other questions that you may want to ask a clinician to weigh in the pros and cons of tDCS? What other clarifications could you seek for the risks mentioned above to make an informed decision?
